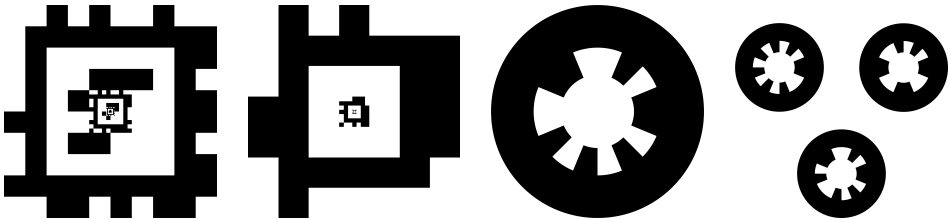
Autonomous Drone Landing with Fiducial Markers and a Gimbal-Mounted Camera for Active Tracking

Joshua Springer, Marcel Kyas

5 December 2022

Reykjavik University
Department of Computer Science

Fiducial Markers

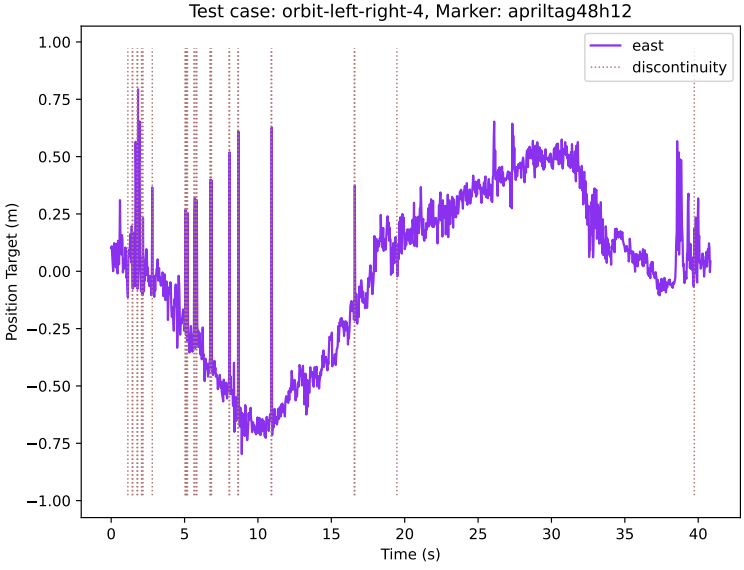


April Tag 48h12[1] April Tag 24h10 WhyCode[2] (Orig) WhyCode Multi

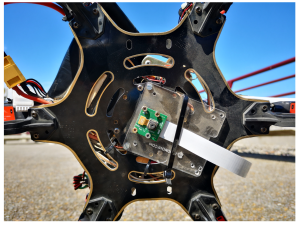
- Marker *position* $\rightarrow$ accurate
- Marker *orientation* $\rightarrow$ ambiguous

[1] Krogius, Haggenmiller, and Olson 2019.
[2] Lightbody, Krajník, and Hanheide 2017.

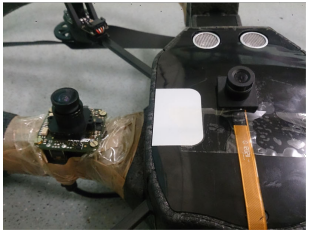
Orientation Ambiguity



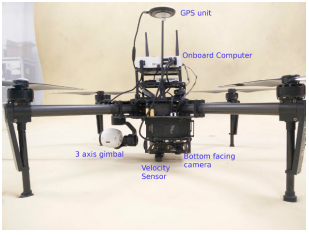
The Downward-facing Camera Paradigm



Single fixed camera.[3]



Dual fixed cameras.[4]



Gimbal/fixed cameras.[5]

- We want to leverage the standard monocular, gimbal-mounted camera.

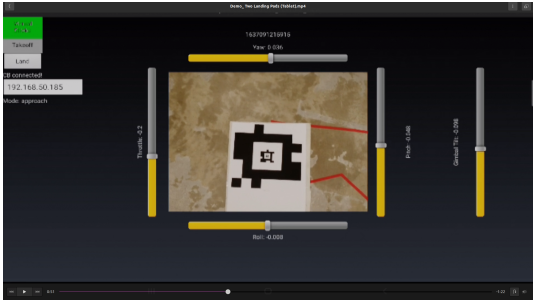
[3] Wubben et al. 2019.
[4] Araar, Oualid and Aouf, Nabil and Vitanov, Ivan 2017.
[5] Borowczyk et al. 2017.

Testing Platform: DJI Spark

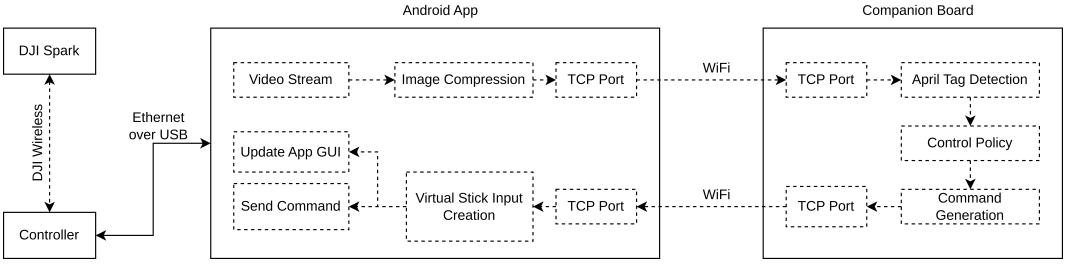
- Small quadcopter
- Gimbal-mounted camera
- DJI Mobile SDK

Testing Platform: Software Side

- DJI Mobile SDK: App-style artchitecture
- Export video to Raspberry Pi 4 companion board
- Return control signals

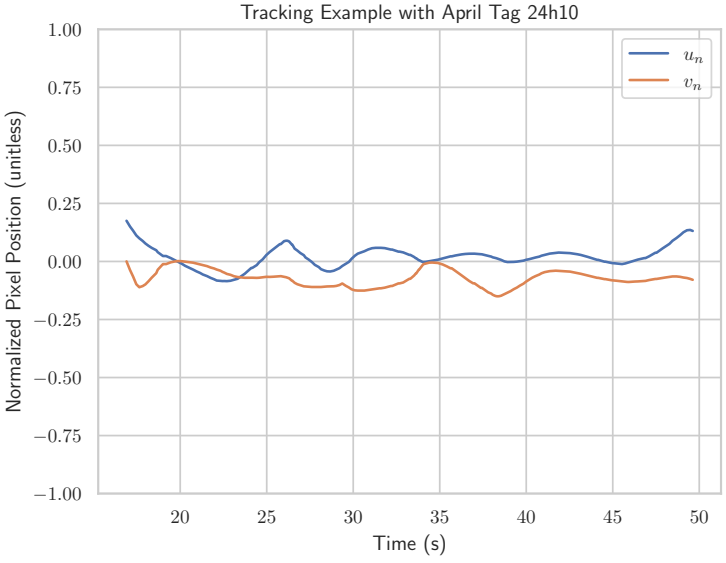


Data Flow

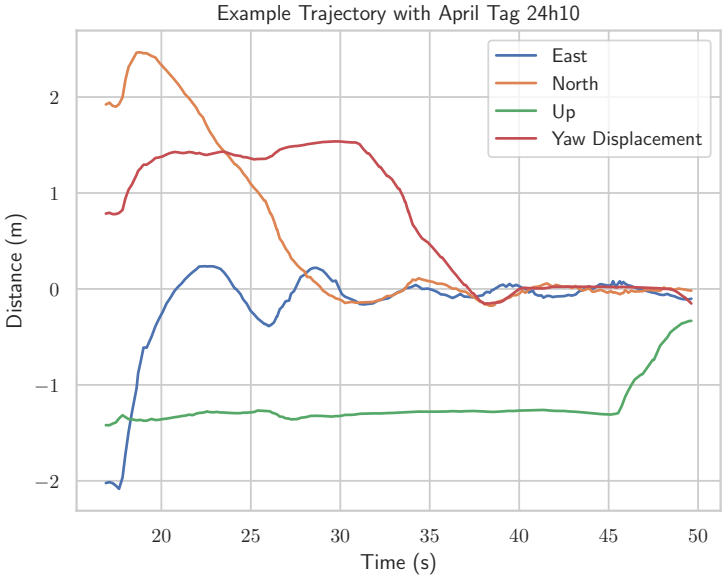


Demonstration Video

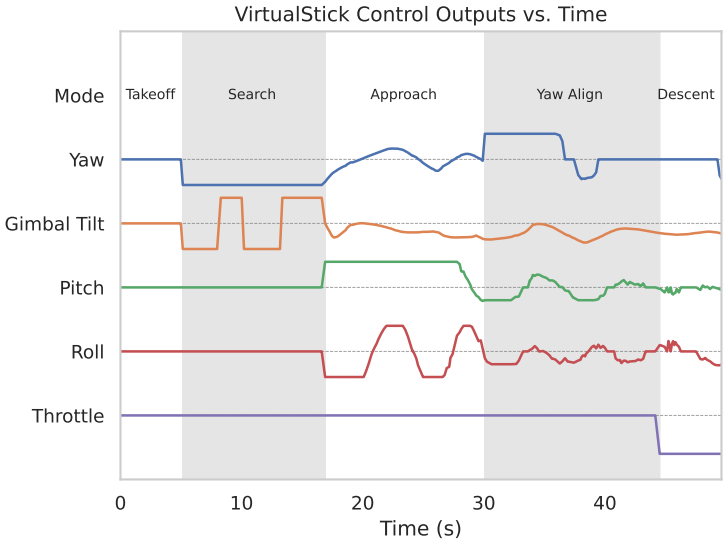
Example Tracking Performance



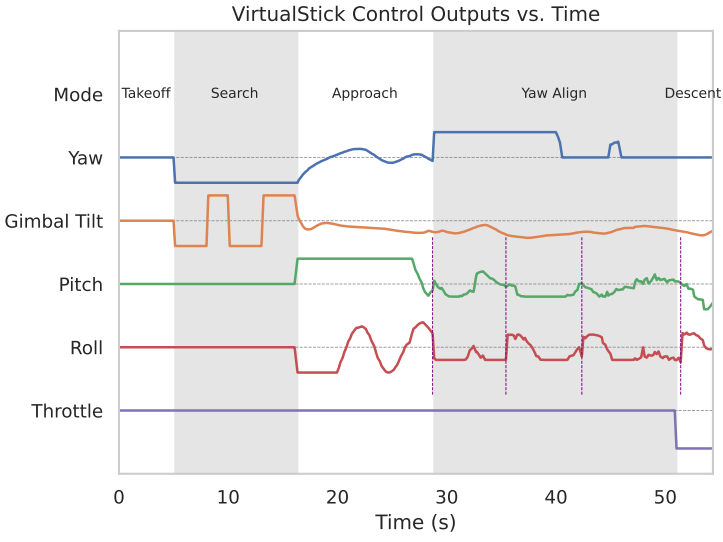
Example Landing Trajectory



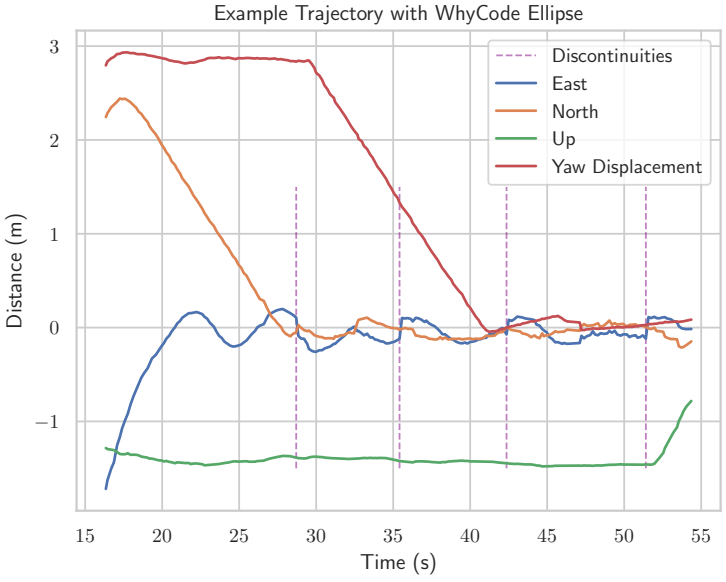
Example Control Outputs



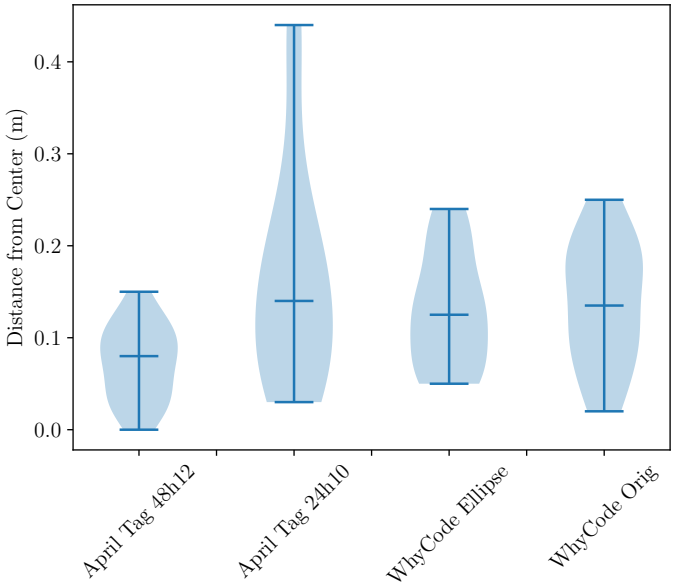
Control Outputs With Discontinuities



Landing Trajectory with Discontinuities



Landing Error (Lower is better!)



Future Work

- Use another drone platform

Future Work

- Use another drone platform
  - Phantom, Mavic, custom Tarot platform

Future Work

- Use another drone platform
  - Phantom, Mavic, custom Tarot platform
  - More gimbal tilt range

Future Work

- Use another drone platform
  - Phantom, Mavic, custom Tarot platform
  - More gimbal tilt range
- Connect companion board directly to controller

Future Work

- Use another drone platform
  - Phantom, Mavic, custom Tarot platform
  - More gimbal tilt range
- Connect companion board directly to controller
- Test 3 separate methods for each fiducial system:

Future Work

- Use another drone platform
  - Phantom, Mavic, custom Tarot platform
  - More gimbal tilt range
- Connect companion board directly to controller
- Test 3 separate methods for each fiducial system:
  - Raw/unfiltered marker pose

Future Work

- Use another drone platform
  - Phantom, Mavic, custom Tarot platform
  - More gimbal tilt range
- Connect companion board directly to controller
- Test 3 separate methods for each fiducial system:
  - Raw/unfiltered marker pose
  - Filtered marker pose, e.g. KF

Future Work

- Use another drone platform
  - Phantom, Mavic, custom Tarot platform
  - More gimbal tilt range
- Connect companion board directly to controller
- Test 3 separate methods for each fiducial system:
  - Raw/unfiltered marker pose
  - Filtered marker pose, e.g. KF
  - Marker *position* and gimbal *orientation* for pose transforms

Main Messages

- *Actuated*, gimbal-mounted camera

Main Messages

- *Actuated*, gimbal-mounted camera → easier to search for the landing pad.

Main Messages

- *Actuated*, gimbal-mounted camera $\rightarrow$ easier to search for the landing pad.
- Orientation ambiguity, discontinuities

Main Messages

- *Actuated*, gimbal-mounted camera $\rightarrow$ easier to search for the landing pad.
- Orientation ambiguity, discontinuities $\rightarrow$ pose estimation is harder.

Main Messages

- *Actuated*, gimbal-mounted camera $\rightarrow$ easier to search for the landing pad.
- Orientation ambiguity, discontinuities $\rightarrow$ pose estimation is harder.
- Autonomous precision landing still possible

Main Messages

- *Actuated*, gimbal-mounted camera $\rightarrow$ easier to search for the landing pad.
- Orientation ambiguity, discontinuities $\rightarrow$ pose estimation is harder.
- Autonomous precision landing still possible but can be improved.
